STUDENT SERVICES / UC-STU-06

Resource Feedback & Issue Reporting

An authorized user of a university room or borrowed device may optionally report a problem or suggestion, during or after use, so the responsible staff member can review and resolve it.

Primary actor	Student organizer, borrower or recorded group participant
Supporting actors	Responsible room faculty administrator / facilities staff; equipment custodian
Preconditions	A verifiable relationship to a room booking, equipment loan or registered group activity exists.

Main success scenario

1. During an active room reservation or equipment loan, the student can open Report an Issue from that record; after room use or verified equipment return, the system also offers an optional feedback prompt.
2. Student may select an issue, suggestion or general comment; identifies the affected resource and writes a short description. Feedback may be skipped without consequences.
3. The system verifies participation/borrowing rights, links the report to the resource and usage record, timestamps it, and submits it to the authorized responsible person.
4. For group room activities, the organizer and each explicitly recorded participant may submit separate reports; group membership is verified and one participant cannot access another's private feedback.
5. The room administrator/facilities contact or equipment custodian reviews the report, may request clarification, records a response and updates status: Submitted - Under Review - Resolved / Closed.
6. The reporter can follow their own report status and receives meaningful in-app updates. Staff may take an authorized resource-unavailability or maintenance action when warranted.

Business rules and constraints

Optional by design	No mandatory score, rating or feedback. Skipping does not block a room session, equipment return or future legitimate requests.
Responsible routing	Room feedback goes to the responsible faculty room administrator or configured facilities contact; equipment feedback goes to its custodian.
Privacy and access	Only reporter, relevant staff and specifically authorized administrators may read private report content. Do not expose unrelated appointments, loans or participants.
Resource safety	A report does not automatically mark a resource unusable, except where an explicitly approved safety rule applies; authorized staff can block unsafe equipment/rooms.
Traceability	Record reporter, resource, linked activity, timestamps, status, staff responses and resolution history; prevent unauthorized status changes.

Alternative outcomes

User chooses Skip: no feedback record is created. No verified association: deny submission. Report concerns an urgent safety problem: visibly direct the user to contact staff immediately and flag it for prioritized review. Incorrect routing: do not expose it to an unrelated faculty.

Postconditions

Submitted feedback is available to the appropriate authorized staff and can be tracked by its reporter. A resolved case retains its status, staff response and history; resource availability changes only through the approved operational workflow.
