STUDENT SERVICES / UC-STU-03

Student Equipment Borrowing

A student requests returnable university equipment; the owning faculty custodian approves, verifies collection and records physical return.

Actors	Authenticated student; designated faculty equipment custodian; university administrator (custodian assignment).
Preconditions	Equipment types and physical units have explicit faculty ownership, condition and borrowing policies. A valid authorized custodian is configured.

Main success scenario

1. Student browses eligible equipment, specifications, owning faculty, availability, allowed duration and pickup/return information without seeing other borrowers.

2. Student selects one or more equipment types and quantities from one faculty, enters purpose, pickup and expected-return dates, and optional notes or requirements.

3. The system checks eligibility, quantities, condition, current loans and overlapping reservations. It recommends suitable units; compatible devices or feasible periods may be offered when supported by available data.

4. Student submits. Status becomes Pending Approval; no inventory is reserved. Repeated submission of the same unchanged form does not create duplicates.

5. The current faculty custodian approves or rejects. Approval atomically rechecks the full request and reserves specific eligible physical units; the student receives an in-app update.

6. At collection, the custodian verifies the listed assets, records condition and handover time, borrower and due date. The loan becomes Borrowed.

7. Student may announce return intent. The custodian physically verifies each returned unit and condition; partial returns remain outstanding until every unit is returned. Only usable verified returns become available.

8. Student and custodian view loan status, due dates, overdue warnings and lifecycle history. Changes identify the responsible actor and time.

Alternatives and exceptional scenarios

No custodian / no stock: explain the configuration or availability problem; never silently approve. No partial quantity or incompatible substitution is automatic.

Cancellation: student may cancel pending or approved uncollected requests; reserved units are released. Borrowed equipment requires physical return, not cancellation.

Extension: student requests a later return; custodian approves only after policy and reservation revalidation. Conflicting extensions are rejected.

Overdue / damage / missing: due dates do not imply return. Missing, lost, damaged and maintenance units remain unavailable. Staff see affected reservations; no automatic financial penalties.

Concurrent decisions / failures: prevent overlapping reservations of the same unit. Unauthorized changes fail; failed operations leave no partial approval or inventory update.

Business rules and postconditions

A request belongs to one faculty and requires its current authorized custodian. Students see only their own loan details. Administrators explicitly assign or replace custodians. Approved reservations hold exact units; handover establishes possession; verified returns release units according to condition. All important lifecycle actions remain auditable.
