USE CASE SPECIFICATION · UC-STU-01

Request a Professor Appointment

University Resource Allocation and Scheduling System

Primary actor Student (organizer)	Other actors Selected professor(s); invited students

Goal

A student requests a meeting within the selected professor(s)' published availability. The appointment is confirmed only after every selected professor accepts.

Participation scenarios — same use case

One-to-one	1 student + 1 professor	One-to-many	1 student + multiple professors
Many-to-one	Multiple students + 1 professor	Many-to-many	Multiple students + multiple professors

Precondition

The student can access the service, and the selected professor(s) have published appointment hours.

Main success scenario

1. The student selects a faculty/department and professor(s), and adds invited students for a group meeting.
2. The student enters the purpose and duration of the meeting.
3. The system displays eligible slots within all professors' published appointment hours, excluding blocked times and known conflicts. Suitable times may be recommended.
4. The student chooses an eligible slot, including a recommendation, or proposes a time that the system verifies is available.
5. The request becomes Pending Approval. Invited students may decline; professors see current participant status and review the request.
6. When all selected professors approve, the system rechecks availability and confirms the appointment, even if invited students declined.

Alternative outcomes

• Invited student declines: Their status is shown to professors; the request continues.

• Professor declines: The request is declined.

• No eligible time: The system explains the issue and blocks submission; the student tries another date or slot.

• Time becomes unavailable: Confirmation is blocked to prevent double-booking; a new slot is required.

• Cancellation: The organizer or a selected professor can cancel; affected participants are informed.

Result

The request is Pending Approval, Declined, Confirmed, or Cancelled. Only confirmed appointments reserve calendar time.
