STUDENT SERVICES / UC-STU-02

Student-Initiated Room Allocation

A student requests a suitable university room. Its owning faculty reviews the proposal and each approved dated occurrence.

Actors	Preconditions
Authenticated student organizer; designated room-owning faculty administrator; optional invited professors; explicitly registered student participants.	Rooms have faculty ownership, facilities, capacity, access rules and a designated approver. Applicable calendars are configured; recurring requests require an explicitly designated semester.

Main success scenario

1. Student enters activity purpose/category, description, attendee count, facilities and optional faculty/building preferences. They may register actual student participants and invite professors.

2. Student chooses one interval or bounded weekly recurrence: semester, weekdays, first/last start dates, university-local start time and duration. Every occurrence is displayed. For recurrence, choose All occurrences required or Partial approval allowed.

3. The system checks access, capacity, facilities, closures and academic/appointment commitments, ranks suitable rooms and explains conflicting dates. Prefer a consistent room; never silently substitute another room.

4. Student reviews a recommended or verified alternative room and submits. The proposal awaits faculty approval and reserves nothing. Optional professor accept/decline responses do not veto the reservation.

5. The responsible administrator reviews all dates. In all-required mode, recheck and reserve every required date atomically or none. In partial mode, approve selected feasible dates, leave others unapproved or reject them with explanations.

6. The student sees each approved, unavailable, rejected or cancelled date, notifications and calendar entries. Only approved dates reserve the selected room and organizing student.

7. Organizer/current responsible approver may cancel one future occurrence or all remaining future dates. Release affected holds, preserving past outcomes and history.

Business rules

Dates and policy: Every recurring interval fits one explicit semester. Missing semester configuration blocks recurrence, not one-time booking. Configured weekly-hour/active-series limits apply; no university quota is invented.

Fairness: Respect confirmed reservations and existing eligible waiting queues. Equal priorities use FCFS. Responsible staff may choose configured priority overrides only with recorded actor, timestamp, original/selected priority and mandatory reason; eligibility, safety and concurrency rules still apply.

Changes and privacy: Material changes need a fresh reviewed proposal. Past dates are immutable. Only registered participants and responsible staff see private details; others see permitted free/busy information. Club affiliation is declared, not automatically verified.

Alternatives and exceptional scenarios

Unavailable dates: explain conflicts and offer feasible room/time alternatives. No silent date or requirement changes. Missing approver blocks confirmation. One-time requests may separately opt into UC-STU-05; a recurring series is not split into queues. Optional actual-use feedback follows UC-STU-06.

Postconditions

Confirmed dates hold exact room/organizer reservations. Unapproved, unavailable and rejected dates hold nothing. Future cancellation releases only its affected reservations; historical use remains.
