STUDENT SERVICES / UC-STU-03

Student Equipment Borrowing

A student requests returnable equipment. The owning faculty custodian reserves inventory, verifies collection and records physical return.

Actors	Preconditions
Authenticated student; current designated faculty equipment custodian; authorized administrator assigning or replacing custodians.	Equipment types and physical assets have explicit faculty ownership, conditions and lending policies. A responsible authorized custodian is configured. Recurrence requires an explicitly designated semester.

Main success scenario

1. Student browses eligible categories, specifications, faculty, quantities, duration limits and collection information without seeing other borrowers.

2. Student chooses complete type/quantity requirements from one faculty, purpose and notes. Continuous borrowing stays one loan. Separate recurring pickups use explicit semester, weekdays, date range, local pickup time and each period's duration.

3. Student selects All occurrences required or Partial approval allowed and reviews every generated pickup/return interval. The system checks eligibility, condition, possession, policy and overlapping reservations and explains valid alternatives.

4. Submit for custodian approval without holding inventory. Unchanged retries do not create duplicate requests. The custodian reviews every date; all-required approval reserves all dates atomically or none, while partial consent permits selected feasible dates or per-date rejection.

5. Each approved date reserves the complete requested quantity and identified eligible units. At collection the custodian verifies actual assets/condition and records borrower, custodian, time and due date. Reserved units may differ between dates.

6. Student may announce return intent. Custodian physically verifies returned units and condition. Partial returns leave other units borrowed; only usable verified returns become available.

7. Student can cancel one uncollected future occurrence or remaining future pickups, never physical possession or past returns. An extension for an actual collected occurrence requires custodian approval after semester, quota and reservation rechecks.

8. Student/custodian view authorized per-date status, notifications, overdue attention flags, reminders and actor/time history.

Business rules

Physical possession: A due date is not a return. Outstanding, missing, damaged or maintenance-blocked units cannot be handed out again. Overdue loans remain active; affected reservations need staff attention. No automatic penalties.

Dates and fairness: All recurring pickups and returns fit one explicitly configured semester. Administrative limits have no invented quota defaults. Existing eligible queues retain priority/FCFS; responsible custodian overrides require actor/time/original/selected/reason audit and never displace confirmed reservations or safety rules.

Authority and privacy: Only the owning faculty custodian manages lending; room approval does not imply custody. Students see their own loans. Feedback is optional; actual-use reports follow UC-STU-06. Actions and physical history remain auditable.

Alternatives and exceptional scenarios

Missing custodian or insufficient stock: explain unavailable dates without reducing quantities or silently changing periods. Invalid/conflicting extensions leave due dates unchanged. Eligible one-time requests may join UC-STU-05; recurring requests are not split into independent waiting lists.

Postconditions

Only approved dates reserve exact complete quantities. Handover establishes possession; verified returns release usable units. Unapproved/rejected dates hold nothing. Cancellation preserves past outcomes and active return obligations.
