STUDENT SERVICES / UC-STU-02

Student-Initiated Room Allocation

A student requests a suitable university room; the room-owning faculty reviews the complete proposal. Recurrence extends the existing booking workflow.

Actors	Authenticated student organizer; designated administrator of the room-owning faculty; optional invited professors; registered student participants.
Preconditions	Rooms have an owning faculty, capacity, facilities and eligibility rules, with a designated approver. Applicable academic dates and calendars are configured.

Main success scenario

1. Student enters purpose/category (study, meeting, student-led lecture, club or other university activity), description, total attendees, facilities and optional faculty/building preferences. They may register actual student participants and invite professors.

2. Student chooses one dated interval or a bounded weekly series: selected weekdays, first/last start dates, university-local start time and duration. The system displays every generated occurrence.

3. The system checks capacity, facilities, access, closures and applicable academic/appointment commitments, ranks eligible rooms and explains the recommendation. A recurring proposal uses one suitable room on every date.

4. Student reviews the recommended room or a verified alternative and submits. The whole proposal becomes Pending Faculty Approval; no room or person is reserved.

5. The room-owning faculty administrator reviews all dates and approves or rejects. Optional professors accept or decline attendance independently; their responses do not veto the booking.

6. Before confirmation, current availability and policy are rechecked. The complete remaining proposal is reserved atomically or none. The organizer sees decisions, invitation responses, notifications and dated calendar entries.

7. Organizer or current assigned faculty approver may cancel a future series occurrence or remaining future occurrences. Relevant reservations are released, while past uses and history remain intact.

Business rules and recurring extension

Selection: Students specify requirements, not an obligatory room. Cross-faculty search respects ownership and access. Deterministic suitable-room ranking does not misuse multi-room/shared-examination policies.

Recurrence: Dates are explicit and bounded; undated legacy records never receive guessed semester dates. No silent room switching, partial series confirmation or independent waiting-list enrollment. Continuous use remains an ordinary single interval.

Changes and privacy: Material changes require revalidation and fresh approval. Past series dates are not edited. Participants and approvers see authorized details; others see permitted free/busy information. Club affiliation is declared, not automatically verified.

Alternatives and exceptional scenarios

No common room or conflicting date: show constraints/dates and feasible room or revised-time alternatives. Stale recommendations require a fresh candidate; no silent substitution. Missing approver configuration blocks confirmation.

Rejection holds no room. Cancellation is recorded and notified. Eligible one-time requests may separately opt into UC-STU-05; optional actual-use feedback follows UC-STU-06.

Postconditions

Confirmed: the same eligible room and organizer are reserved for each approved dated occurrence. Pending/rejected: no reservation. Cancelled future dates release their holds without deleting past use.
