STUDENT SERVICES / UC-STU-03

Student Equipment Borrowing

A student requests returnable university equipment; the owning faculty custodian reserves inventory, verifies collection and records physical return.

Actors	Authenticated student; current designated faculty equipment custodian; authorized administrator assigning or replacing custodians.
Preconditions	Equipment types and physical assets have explicit faculty ownership, conditions and borrowing policies. An active authorized custodian is configured.

Main success scenario

1. Student browses eligible categories, equipment specifications, faculty, available quantities, duration limits and collection information without viewing other borrowers.

2. Student selects types and complete quantities from one faculty, purpose, optional exact requirements and notes. They choose continuous borrowing or separate bounded weekly pickup/return periods.

3. For recurrence, student selects weekdays, explicit first/last pickup dates and local pickup time. The pickup/return fields define each period's duration. Every dated occurrence is previewed before submission.

4. The system checks eligibility, policy, condition, possession and overlapping reservations. It recommends eligible units and explains unavailable dates or valid alternatives; no incompatible or reduced-quantity substitution is automatic.

5. Submission becomes Pending Approval and holds no inventory. Repeated unchanged submissions do not duplicate requests. The custodian reviews every period and approves the complete feasible proposal or rejects it.

6. Approval atomically reserves specific units for each occurrence. At each collection, the custodian verifies asset identifiers and condition and records actual handover, borrower, custodian, timestamp and due date.

7. Student may announce return intent. The custodian physically inspects and records each returned unit and condition. Partial returns leave outstanding units borrowed; only usable verified returns become available.

8. Users view permitted status, notifications, pickup/return reminders and actor/time history. Students may request a later return for a collected occurrence; the custodian rechecks policy and all future reservations before deciding.

Business rules and recurring extension

Recurrence versus continuous use: A continuous multi-day loan is not split. Recurring periods have independent reservations, handovers and returns under one parent request. Units may differ across dates, but every reserved asset is identified.

Physical possession: Due dates never imply return. An unreturned, missing, damaged or maintenance-blocked asset cannot be handed out again. Overdue loans and affected reservations require staff attention; no automatic financial penalties.

Cancellation: Cancel pending/uncollected future occurrences or remaining future pickups. Do not cancel physical possession or retroactively alter completed returns. Material changes need a fresh proposal and approval.

Authority and privacy: Current owning-faculty custodians alone manage lending; room-approval authority does not imply custody. Students see their own loans. Actions are auditable and concurrent overlapping reservations are prevented.

Alternatives and exceptional scenarios

No configured custodian or insufficient stock: explain the issue without silent approval of fewer units or dates. Conflicting extensions fail without changing the due date.

Unavailable recurring proposals require revised dates/requirements, not independent waiting queues. UC-STU-05 remains available for eligible one-time requests; UC-STU-06 provides optional private actual-use reports.

Postconditions

Approval reserves the exact complete quantity for all approved periods. Handover establishes possession; verified returns release usable units. Cancellation preserves history and active loans. Failures leave no partial approval.
